

# TRENDS IN STUDENT SUCCESS ANNUAL SERIES CENTERING EQUITY

A MEANINGFUL REVIEW OF PRACTICES + INNOVATIONS TO HELP IMPROVE STUDENT OUTCOMES

## THE CHALLENGE

Focusing mostly on big data sets, reports on postsecondary student success trends showcase an important, but limited, glimpse into student lives and outcomes. **Qualitative** complements to the data are lacking, particularly for understanding the **lived experiences and needs of students of color** and the many transformative **innovations** occurring across the country.

**The Bottom line:** Numbers only say so much; without a more holistic look at student success trends, we are missing opportunities to improve outcomes, especially for students historically excluded from college.

## THE OPPORTUNITY

A new annual series on “Trends in Student Success” could create a **must-have resource** and **comprehensive summary of innovations across the postsecondary education industry** to support student retention, persistence, achievement, attainment, advancement, and holistic development.

## THE PROPOSAL

### HEI PROPOSES AN ANNUAL REPORT WITH:

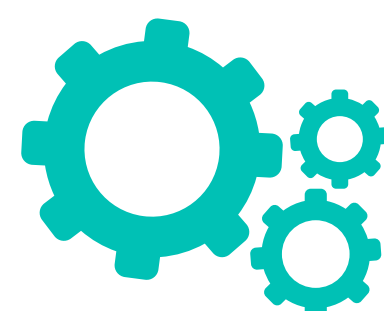

Key student data trends related to student success, focusing on equity and outcomes for poverty-affected and minoritized students.

Case studies and summaries of emerging trends and innovations impacting positive student outcomes.

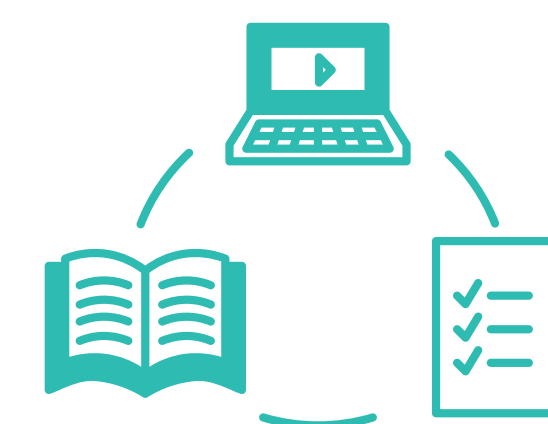

### REPORT HIGHLIGHTS COULD INCLUDE:

Reviews of innovative technology products.

Best practices using data for predictive analytics, strategic planning, and decision-making.

Unique applications of developmental education tools, programs, and approaches.

Emerging innovations in “learn and earn” models.
